Best 360 antivirus for android. 360 antivirus for android. 360 antivirus for android apk free download. Free 360 antivirus for android. Best free 360 antivirus for android. 360 antivirus for android mobile free download. Norton 360 antivirus for android. 360 antivirus for android apk.

Opera 是一簡單好用的瀏覽器，以其高效能和安全性著稱。Opera 內建安全連線、惡意程式防護、以及免費 VPN 等功能，讓您能安全上網；同時並搭載電源節約及廣告攔截工具，大幅提高瀏覽效率。 360 網路安全防護 360 網路安全防護附加元件採用雲資料庫技術，它會將您造訪的 URL 與雲端資料庫做比對，一旦發現威脅便立即發送警告，快速將惡意網站阻擋在外。 360 Anti-mining protection With the advancement of digital currency and blockchain technologies, many websites make money by implanting Cryptominer instead of displaying advertisement. If you visit a website with built-in Cryptominer script, the bursting CPU usage may crash your system or destabilize your PC performance as a result. Anti-mining Protection terminates the execution of mining script to ensure the system work smoothly and avoids the performance impact by Cryptomining. Although these kind of unauthorised behaviors and resource occupations do not involve identity or privacy theft, it affects your web browsing experience and PC performance and should still be blocked. Phones are often secondary devices to laptops and PCs. So your best bet is to figure out what's best for those primary machines, make sure the antivirus for PC supports Android devices, and you're good to go. However, if your primary concern is your Android phone or tablet security, or you just want to choose a good antivirus that has great apps for both Windows and Android, here's our take on the best antivirus apps for Android. All of these apps support solid security, and have enough features to keep your phone secure beyond just malware scans. In our recommendations we link to the Android app itself in the Google Play store, but if you're shopping for a holistic solution that will protect all your devices as well as your Android phone (something we recommend!), we also link to the review of the full desktop AV suite. You can find even more information on desktop protection in our roundup of the best AV software. And for more Android-focused protection, check out our roundup of the best VPNs for Android. Best antivirus for Android We really liked Avast One on the desktop, and it makes a lot of sense to put it on Android too. First of all, Avast offers top-notch protection and performance inside a well-priced package. Avast One costs \$50 for the first year to cover five devices, and \$100 per year after that. Avast One offers apps for Android, iOS, Mac, and Windows with varying protection levels on each depending on what it's allowed to do. On Android, Avast One offers antivirus scanning, it scans apps to ensure they're safe, and there's a Web Shield feature to keep your browsing habits on mobile safer. It also has a VPN with unlimited bandwidth built into the app, and Avast One scans your online accounts to see if any of your password or usernames have leaked. Plus, like any modern app, there's an optional dark mode for those who want it. Avast One for Windows review Acquired by NortonLifeLock in early 2021, Avira Prime is a very solid antivirus. In our Windows review we gave Avira four out of five stars, and AV-Test gives Avira top marks for protection on Android, as does AV-Comparatives. Like Avast, Avira does a "smart scan" that goes beyond just a check for malware. Avira's version also checks for potentially dangerous apps, email breaches, and it scans for unprotected Wi-Fi connections. There are also some features for optimizing storage and memory, and other performance checks, plus Avira has a VPN, web protection, and it can lock sensitive apps behind an extra pin. Avira Prime costs \$48 for the first year covering five devices and the price rises to \$80 per year after that. Avira Prime for Windows review Norton 360 is one of our top picks on Windows, and it's also an excellent choice on Android, with top-notch protection. Norton's Android app is pretty straightforward with features such as app scanning, web shield for browsing, built-in VPN, and it scans your SMS messages for scams—though Google already does a pretty good job of this. If you're already subscribed to Norton for your PC, it'll do a good job on your Android phone too. Norton 260 Deluxe is \$50 for the first year and \$105 thereafter, covering up to five devices. Norton 360 for Windows review Trend Micro Maximum Security really goes for it with a ton of features on mobile. It does the standard stuff we've already seen, such as scanning apps, keeping your browsing safe, checking for unsecured Wi-Fi connections, and there are a number of device optimization features to keep your device running well. Trend Micro's app design is pretty straightforward, making it easy to navigate and manage the security of your device in one spot. Maximum Security costs \$50 for the first year covering five devices and \$90 after that. Trend Micro Maximum Security for Windows review Bitdefender is another admirable performer on Android as far as protection goes. It also has all the key elements you need for mobile security, including app scanning, malware scanning, and web browsing protection, as well as the ability to block access to sensitive apps, and data breach monitoring. Bitdefender's Windows protection is also very good. Bitdefender Total Security covers up to five devices for \$40 per year and \$90 after that. Bitdefender Total Security for Windows review How we test AV on Android Determining the best antivirus for Android is a little different than what we do on Windows. The most sensible thing to do for mobile is to just use the security app to get an idea of how it works, whether it unreasonably drains the battery, suddenly slows down performance, or makes common tasks harder to carry out. We also considered the antivirus protection ratings from AV-Test and AV-Comparatives, as well as compare each suite's performance on Android to its performance on Windows. How to choose an antivirus app for Android Choosing an antivirus app for Android is similar to choosing other mission-critical apps. You do not want to take a risk by downloading an application you've never heard of. It's always best to stick with security apps you know about or which have been well reviewed. Also, when it comes to security there are some good free options out there, but to get the most out of your security app you need to pay for the full experience. If all you need is some basic on-demand malware scanning then a free app will likely do, but the paid services is where the best features can be found. That's it for our run-down of the best antivirus apps for Android. With these options you should be able to find something that suits your needs and your budget. Screens are simulated and subject to change. helps detect and safeguard you from navigation to fraudulent and malicious websites when using your preferred browser, app, SMS, MMS, Email, and social networking sites. lets you know when your operating system has vulnerabilities, so you can take action to help protect your device against cybercriminals that could take control of it or steal your personal information. proactively helps protect your smartphone against mobile threats like malware, ransomware, adware, and privacy leaks using our award-winning, patent-protected app scanning technology. helps detect and alert you when a network you join is dangerous or under attack to help protect your personal and financial information. See a 30-day analysis of previously scanned Wi-Fi networks, websites, device vulnerabilities, and risky apps. Filters spam SMS text messages that may contain phishing attacks. Suspicious Network Detection See potentially unsafe Wi-Fi networks in your area and get notified when a Wi-Fi network you're using is compromised. Free apps are good at telling you what benefits they provide, but they may not tell you their real "costs." App Advisor (powered by Norton Mobile Insight), when turned on, automatically lets you know about malware, online privacy and other risks that are detected before you download from Google Play™ to help you make informed app decisions — and whether that free app is worth the final cost. To help protect your personal and financial information from cyber threats, our Wi-Fi Security feature uses advanced scanning technology to help detect and alert you before you join a dangerous network or one that is under attack. This helps you stop unwanted eavesdropping on your Wi-Fi connection and makes it harder for cybercriminals to steal personal information or passwords, infect your device with malware, or use your internet connection to perform illegal activities. Our Web Protection feature helps detect fraudulent and malicious websites when using your browser, app, SMS, MMS, email, and social networking sites to help safeguard your activity and personal information. Norton Mobile Security for Android is powered by a cyber intelligence network system. This includes Norton Mobile Insight, a proprietary app analysis system which crawls app stores, analyzes running apps and uses machine learning to understand Android app behaviors. Our engineering team strives to bring our valued members additional device, network and information protection in this increasingly unsafe cyber world. Report Card Quick, at-a-glance summary of where you need to focus your attention to take action to help secure your device and personal information. Proactive Malware Blocker Helps prevent apps with malware and viruses from being installed on your device before you download from Google Play. Privacy Advisor Automatically scans apps and lets you see privacy risks before you download them from Google Play. Intrusive Adware App Advisor Lets you know if apps may contain intrusive adware before you download from Google Play. Privacy Report Interactive Map Shows where in the world apps might be sending personal information and photos. Safe Browsing Helps protect your device and your personal information from malicious links and sites that install ransomware, trojans and other threats. Wi-Fi Security Get notified about Wi-Fi networks under attack by cybercriminals who might eavesdrop on your Wi-Fi connection to steal or glean personal information or infect your device with malware. Malware Protection Scans, notifies and helps you remove apps with viruses, spyware and other threats. Antiphishing Web Protection Helps protect against online scams by blocking fraudulent websites. Android 8.0 or later. Must have Google Play app installed. Multi-user mode not supported. ColorOS 7.1 or later. Must have Google Play app installed.
